

Fibre Wig Aftercare Instructions

Day to Day Care

For the best results and the prolonged life of your purchase, we recommend:

1. Before/after wearing, spray the fibre-hair lightly with SOFTEN 'N' SHEEN, then gently remove any knots and tangles with fingers.
2. Scrunched permed models **MUST NEVER BE BRUSHED** - arrange instead using fingers only or a wide tooth Afro Comb. Straight or Waved style may be brushed through, using a WIG BRUSH.
3. If worn daily wash every 10 - 14 days otherwise once per month is ok.

Washing Instructions

Because fibre-hair is non-porous it does not need to be washed as frequently as our own hair. To freshen your wig/hairpiece, follow the steps below:

- Step 1: Prior to washing, remove all knots and tangles paying particular attention to the nape section. Permed and extra dry models should firstly be sprayed sparingly with TRENDSCO LUBRICANT and worked through.
- Step 2: Fill a hand bowl with cold/tepid water and little TRENDSCO SHAMPOO and very gently agitate your wig or hairpiece back and forth, in the water.
- Step 3: Gently rinse in clear cold/tepid water. Then blot, condition and rinse.
- Step 4: Pat gently on a towel to remove excess water.
- Step 5: Place on a block to dry naturally.
- Step 6: When completely dry, Spray SOFTEN 'N' SHEEN and style.

Important Notes

Permed/curled styles will need re-setting and further information can be obtained from our Salon. These also require more thorough after care and will need replacing more frequently than waved/straight styles.

Never use tongs or hand held dryer on fibre hair.

Never wash in hot water (this will straighten the fibre hair). It is quite normal to lose some fibre when following the After Care/Washing Guide.

Please also note continual wearing of a fibre wig will result in frizzing at the base, especially the collar length or longer.
