

Human Hair Wig Aftercare Instructions

Place your wig into bowl containing luke warm water. Apply shampoo evenly and gently agitate the hair into a lather. One shampoo is usually enough.

Rinse usign tepid water until all traces of shampoo are removed. Never rinse under high-pressure water spray or tap.

Hard squeeze away excess water and apply conditioner, suitable for bleached and tinted hair, evenly throughout. Work the conditioner into the hair and carefully comb through.

Rinse out the conditioner using a spray of tepid water.

Blot the excess water using a towel and position the wig onto a suitable sized poly head. Take great care at this stage to avoid running teeth of a comb or brush through the knotted roots or foundation as the knots will have absorbed water, expand and become looser (this condition will revert when the hair becomes dry)

All smithy's Human Hair wigs can be set using conventional curlers and hood dryers. Heated rollers will offer a quick temporary curl. You can also use hair straighteners if you would like a straighter look. We do recommend that you use hair products to prolong the condition of your hair which we have found, works the best.

Should your wig need re-colouring we recommend that you always see professional advice.

Skin Tops and Partings

Always comb or brush hair in these sections with the greatest of care especially if the hair is tangled.

Longer hair should always be brushed from ends first and when smoothed out, the brush taken fully through the hair.
